Chapter 1

Namespace Index

1.1 Packages

Here are the packages with brief descriptions (if available):

MA	11
MA.EaseNTween	14
MA.Editor	14
UnityEngine	14
UnityEngine.EventSystems	15

Chapter 2

Hierarchical Index

2.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

MA.BaseItemMenu< LevelItem >	22
MA.LevelItemMenu	39
MA.ColorWrapper	25
MA.DisplayablePaletteColor	26
EditorWindow	
MA.Editor.SpriteSheetEditor	52
MA.Editor.UIAnimatorWindow	61
IBeginDragHandler	
MA.DraggableItem	27
MA.EasedDraggableItem	28
MA.ScrollRectController	49
MA.Swipable	53
MA.DraggablePage	27
MA.EasedDraggablePage	28
MA.EasedSwipable	30
IDeselectHandler	
MA.InputNavigation	36
MA.ListElementFocusHolder	41
IDragHandler	
MA.DraggableItem	27
MA.ResizePanel	47
MA.Swipable	53
IDropHandler	
MA.Slot	51
MA.EasedSlot	30
MA.IDroppableItem	33
MA.DraggableItem	27
IEndDragHandler	
MA.DraggableItem	27
MA.Swipable	53
IEventSystemHandler	
UnityEngine.EventSystems.IChangePage	33
MA.PageController	44
UnityEngine.EventSystems.IgainedItem	34
MA.BaseInventory< T >	21
UnityEngine.EventSystems.ILevelChangeRequest	34
MA.FadingLevelChanger	31

UnityEngine.EventSystems.IListElementSelected	35
MA.ListController	40
MA.ScrollListController	49
UnityEngine.EventSystems.IlostItem	35
MA.BaseInventory< T >	21
MA.IItemDropTarget	34
MA.Slot	51
MA.IMenuTransition	35
MA.AnimatorTransition	20
MA.CanvasGroupTransition	23
MA.TransformTransition	57
MA.IModal	36
MA.AnimatorModal	18
MA.AnimatorToast	19
MA.IToast	38
MA.AnimatorToast	19
MA.IPage	37
MA.DraggablePage	27
MA.EasedPage	29
IPointerClickHandler	
MA.CenterOnClick	24
IPointerDownHandler	
MA.ResizePanel	47
MA.SliderPopUp	51
IPointerEnterHandler	
MA.ToolTipTarget	56
IPointerExitHandler	
MA.ToolTipTarget	56
IPointerUpHandler	
MA.SliderPopUp	51
ISelectHandler	
MA.InputNavigation	36
MA.ListElementFocusHolder	41
MA.IStatusChanged	38
MA.AnimatorPageIndexDisplay	19
MA.RememberPage	46
MA.MBoundsCheck	41
MA.DraggablePage	27
MA.ScrollListController	49
MA.MNumberFormat	42
MA.SliderPopUp	51
MA.TextDial	53
MA.Modal	42
MonoBehaviour	
MA.AbstractInputValidator	17
MA.OddValidator	43
MA.RegexValidator	45
MA.AnimatorModal	18
MA.AnimatorPageIndexDisplay	19
MA.AnimatorTransition	20
MA.BaseItemMenu< T >	22
MA.BaseInventory< T >	21
MA.CanvasGroupTransition	23
MA.CenterOnClick	24
MA.Dial	25

MA.TextDial	53
MA.DraggableItem	27
MA.EasedPage	29
MA.FadingLevelChanger	31
MA.ImageFillEaser	35
MA.InputNavigation	36
MA.InputValidation	36
MA.AnimatorInputValidation	18
MA.ColorInputValidation	24
MA.KeyCodeEvent	38
MA.LevelBaseItem	38
MA.LevelItem	39
MA.LevelChangeButton	39
MA.LevelMenuHelper	40
MA.ListController	40
MA.ListElementFocusHolder	41
MA.PageController	44
MA.PageSwitcher	44
MA.Pagination	45
MA.RememberPage	46
MA.ResizePanel	47
MA.ReturnController	47
MA.ScrollRectController	49
MA.SetAnimatorBool	50
MA.SliderPopUp	51
MA.Slot	51
MA.SpriteSwapToggle	52
MA.Swipable	53
MA.TextReveal	54
MA.NumberReveal	43
MA.RandomCharReveal	45
MA.ToolTip	55
MA.AnimatorToolTip	19
MA.ToolTipTarget	56
MA.TransformTransition	57
MA.Typer	61
MA.UIMenu	61
MA.UnitySingleton< T >	62
PropertyAttribute	
GetOrAddComponent	32
RequireDependencies	46
PropertyDrawer	
DisplayablePaletteColorDrawer	26
MA.Editor.GetOrAddComponentDrawer	33
MA.Editor.RequireDependenciesDrawer	47
StringOptionsDrawer	53
ScriptableObject	
ColorScheme	25
Selectable	
MA.ListElement	41
MA.ExpandableListElement	31
MA.AnimatorExpandableListElement	17

MA.UnitySingleton< TweenManager >	62
MA.EaseNTween.TweenManager	60

Chapter 3

Class Index

3.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

MA.AbstractInputValidator	17
MA.AnimatorExpandableListElement	17
MA.AnimatorInputValidation	18
MA.AnimatorModal	18
MA.AnimatorPageIndexDisplay	19
MA.AnimatorToast	
Animator toast. Hides an Displays a Toast using the Animator.	19
MA.AnimatorToolTip	
Animator tool tip, handles the showing and hiding of the toolTip via the Animator	19
MA.AnimatorTransition	
Uses the Animator for UI Animations	20
MA.BaseInventory< T >	
Base inventory. Manages Inventory Items of type T (Storing References, Accepting or Refusing new Items, Connecting Slots (Implementing IItemDropTarget) with Items (with a Component implementing IDroppableItem)). The Slots should be children of the Inventory.	21
MA.BaseItemMenu< T >	
Base item menu. Backed up by a Dictionary of provided Type T (derived from Component). Keys are the Instance Ids of the Gameobjects associated with the Component T. The instance IDs will furthermore be accessible under the name of the GameObject they were registered with	22
MA.CanvasElement3D	
This Component takes care of scaling a (child) 3D Object with a Mesh Renderer to fit a Rect Transform. The 3D Object will be uniformly scaled and can either fit the height, width or bounds of the parent Rect Transform	23
MA.CanvasGroupTransition	23
MA.CenterOnClick	
Works with a ScrollRectController to center the ScrollRect viewport on this GameObject when clicked on	24
MA.ColorInputValidation	24
ColorScheme	25
MA.ColorWrapper	25
MA.Dial	
Dial . Showing progress between a min and a max value via the fillAmount of an Image	25
MA.DisplayablePaletteColor	
Displayable palette color. A class with a Custom Drawer to Choose from a Color from all Color Palettes in the asset folder. Implicitly convertible to Color	26
DisplayablePaletteColorDrawer	26
MA.DraggableItem	27
MA.DraggablePage	27

MA.EasedDraggableItem	28
MA.EasedDraggablePage	28
MA.EasedExpandableListElement	29
MA.EasedPage	29
MA.EasedSlot	30
MA.EasedSwipable	30
MA.ExpandableListElement	31
MA.FadingLevelChanger	31
MA.GameObjectDeactivator	
Game object deactivator. Deactivates a gameObject based on the Animator State it's Animator is in without constantly checking the Animator State or Transition Info. Used by the Animator Toast for Example	32
GetOrAddComponent	
Gets the declared Component or adds one if none is present on the GameObject (or its children and parent when lookInChildren or lookInParent is set to true) Only works if the property field is serialized (public or decorated with the SerializeField Attribute)	32
MA.Editor.GetOrAddComponentDrawer	33
UnityEngine.EventSystems.IChangePage	33
MA.IDroppableItem	33
UnityEngine.EventSystems.IgainedItem	34
MA.ItemDropTarget	34
UnityEngine.EventSystems.ILevelChangeRequest	34
UnityEngine.EventSystems.IListElementSelected	35
UnityEngine.EventSystems.IlostItem	35
MA.ImageFillEaser	35
MA.IMenuTransition	35
MA.IModal	36
MA.InputNavigation	36
MA.InputValidation	36
MA.IPage	37
MA.IStatusChanged	38
MA.IToast	38
MA.KeyCodeEvent	38
MA.LevelBaseItem	38
MA.LevelChangeButton	
Level change button. Triggers the changeLevelTo function on a Component implementing I↔LevelChangeRequest higher in the Hierarchy	39
MA.LevelItem	39
MA.LevelItemMenu	39
MA.LevelMenuHelper	40
MA.ListController	
List controller. A List can have one of it's Children selected and hold's a Reference to the last selected Element.	40
MA.ListElement	41
MA.ListElementFocusHolder	
List element focus holder. Propagates Select and Deselect Elements of an Selectable inside (as a Child) an List Element upwards so that a selected List Element doesn't lose Focus	41
MA.MBoundsCheck	41
MA.MNumberFormat	42
MA.Modal	42
MA.ModalManager	
Modal manager. Add to Scene and add Modal Prefabs. The Names (which should be unique) can then be used to display or modify the Modal at runtime later.	42
MA.NotificationManager	42
MA.NumberReveal	43
MA.OddValidator	43

MA.PageController	
Controller for Children Pages (implementing IPage). Switches Pages between an Active and two inactive(Off Screen) States. Can also be used to access the current page index and total amount of pages	44
MA.PageSwitcher	44
MA.Pagination	45
MA.RandomCharReveal	45
MA.RegexValidator	45
MA.RememberPage	46
RequireDependencies	
Require dependencies. Displays a Warning if the GameObject doesn't have all of the Components specified and lists which are missing.	46
MA.Editor.RequireDependenciesDrawer	47
MA.ResizePanel	
Resize panel. Taken from Unity UI Samples almost unmodified except for the Scroll direction adjustment according to the Pivot of the Rect. Resizing is always away from the Pivot	47
MA.ReturnController	
Using Keys to return to the next higher Menu from the current Menu	47
MA.Scheduler	
Scheduler . A class for managing recurring Tasks in arbitrary intervals or scheduling future Actions	47
MA.ScrollListController	
Calculates the appropriate Scrollposition for a list inside a ScrollRect. Can be used with a ScrollRectController to bring the selected Element smoothly into focus.	49
MA.ScrollRectController	
Scroll rect controller. Can be used to bring something inside a ScrollRect into focus	49
MA.SetAnimatorBool	50
MA.SimpleFader	50
MA.SliderPopUp	
Slider pop up. Expects a Text Component somewhere as a child of the Slider, usually as a child of the Handle	51
MA.Slot	51
MA.Editor.SpriteSheetEditor	
Sprite Sheet Editor . Use Case is primarily creation of Sprite Sheets from even numbered amounts of PNG image Sequences into a Power of 2 Spritesheet for Animation.	52
MA.SpriteSwapToggle	52
MA.StringOptions	
String options. Shows an enum Field with the displaynames and sets the choice to the corresponding value. Can be implicitly converted to the chosen string. If ownChoice is set to true	52
StringOptionsDrawer	53
MA.Swipable	53
MA.TextDial	53
MA.TextReveal	
Replaces the text on a Text Component with random Numbers. Then gradually reveals the text while replacing the numbers with the string Character after Character.	54
MA.Toast	55
MA.ToolTip	
Tool tip. Simple class for displaying tooltips. Registers with TooltipManager Singleton and can be accessed via it's toolTipName Property from there.	55
MA.ToolTipManager	
Access Point for showing tooltips. The tooltips can be accessed via the Singleton instance of this class.	56
MA.ToolTipTarget	
Tool tip target. Put this script on any UI Element that you want to show a Tooltip. The tooltipPosition transform will determine the placement of the Tooltip with it's position and pivot (which will allow for finer control of the relative placement of the Tooltip)	56
MA.TransformTransition	57
MA.EaseNTween.Tween	57

MA.EaseNTween.TweenManager	60
MA.Typer	
Typing effect for UI Text Component	61
MA.Editor.UIAnimatorWindow	61
MA.UIMenu	
A Menu which transitions to another UI Menu using the ITransitionMenu Components on the Gameobject. Events will be called when the Menu opens or closes.	61
MA.UnitySingleton< T >	
Unity singleton. A Monobehaviour variant of the Singleton Pattern	62

Chapter 4

Namespace Documentation

4.1 Package MA

Namespaces

- package [EaseNTween](#)
- package [Editor](#)

Classes

- class [AbstractInputValidator](#)
- class [AnimatorExpandableListElement](#)
- class [AnimatorInputValidation](#)
- class [AnimatorModal](#)
- class [AnimatorPageIndexDisplay](#)
- class [AnimatorToast](#)
Animator toast. Hides an Displays a [Toast](#) using the Animator.
- class [AnimatorToolTip](#)
Animator tool tip, handles the showing and hiding of the [toolTip](#) via the Animator
- class [AnimatorTransition](#)
Uses the Animator for UI Animations
- class [BaseInventory](#)
Base inventory. Manages Inventory Items of type T (Storing References, Accepting or Refusing new Items, Connecting Slots (Implementing [IItemDropTarget](#)) with Items (with a Component implementing [IDroppableItem](#))). The Slots should be children of the Inventory.
- class [BaseItemMenu](#)
Base item menu. Backed up by a Dictionary of provided Type T (derived from Component). Keys are the Instance Ids of the Gameobjects associated with the Component T. The instance IDs will furthermore be accessible under the name of the GameObject they were registered with
- class [CanvasElement3D](#)
This Component takes care of scaling a (child) 3D Object with a Mesh Renderer to fit a Rect Transform. The 3D Object will be uniformly scaled and can either fit the height, width or bounds of the parent Rect Transform
- class [CanvasGroupTransition](#)
- class [CenterOnClick](#)
Works with a [ScrollRectController](#) to center the ScrollRect viewport on this GameObject when clicked on
- class [ColorInputValidation](#)
- class [ColorWrapper](#)
- class [Dial](#)
Dial. Showing progress between a min and a max value via the fillAmount of an Image

- class [DisplayablePaletteColor](#)

Displayable palette color. A class with a Custom Drawer to Choose from a Color from all Color Palettes in the asset folder. Implicitly convertible to Color

- class [DraggableItem](#)
- class [DraggablePage](#)
- class [EasedDraggableItem](#)
- class [EasedDraggablePage](#)
- class [EasedExpandableListElement](#)
- class [EasedPage](#)
- class [EasedSlot](#)
- class [EasedSwipable](#)
- class [ExpandableListElement](#)
- class **ExtensionMethods**
- class [FadingLevelChanger](#)
- class [GameObjectDeactivator](#)

Game object deactivator. Deactivates a gameObject based on the Animator State it's Animator is in without constantly checking the Animator State or Transition Info. Used by the Animator [Toast](#) for Example

- interface [IDroppableItem](#)
- interface [IItemDropTarget](#)
- class [ImageFillEaser](#)
- interface [IMenuTransition](#)
- interface [IModal](#)
- class [InputNavigation](#)
- class [InputValidation](#)
- interface [IPage](#)
- interface [IStatusChanged](#)
- interface [IToast](#)
- class [KeyCodeEvent](#)
- class [LevelBaseItem](#)
- class [LevelChangeButton](#)

Level change button. Triggers the `changeLevelTo` function on a Component implementing `ILevelChangeRequest` higher in the Hierarchy

- class [LevelItem](#)
- class [LevelItemMenu](#)
- class [LevelMenuHelper](#)
- class [ListController](#)

List controller. A List can have one of it's Children selected and hold's a Reference to the last selected Element.

- class [ListElement](#)
- class [ListElementFocusHolder](#)

List element focus holder. Propagates Select and Deselect Elements of an Selectable inside (as a Child) an List Element upwards so that a selected List Element doesn't lose Focus

- interface [MBoundsCheck](#)
- class **MBoundsCheckImpl**
- interface [MNumberFormat](#)
- class **MNumberFormatImpl**
- class [Modal](#)
- class [ModalManager](#)

Modal manager. Add to Scene and add [Modal](#) Prefabs. The Names (which should be unique) can then be used to display or modify the [Modal](#) at runtime later.

- class [NotificationManager](#)
- class [NumberReveal](#)
- class [OddValidator](#)
- class [PageController](#)

Controller for Children Pages (implementing [IPage](#)). Switches Pages between an Active and two inactive(Off Screen) States. Can also be used to access the current page index and total amount of pages.

- class [PageSwitcher](#)
- class [Pagination](#)
- class [RandomCharReveal](#)
- class [RegexValidator](#)
- class [RememberPage](#)
- class [ResizePanel](#)

Resize panel. Taken from Unity UI Samples almost unmodified except for the Scroll direction adjustment according to the Pivot of the Rect. Resizing is always away from the Pivot

- class [ReturnController](#)

Using Keys to return to the next higher Menu from the current Menu

- class [Scheduler](#)

[Scheduler](#). A class for managing recurring Tasks in arbitrary intervals or scheduling future Actions

- class [ScrollListController](#)

Calculates the appropriate Scrollposition for a list inside a ScrollRect. Can be used with a [ScrollRectController](#) to bring the selected Element smoothly into focus.

- class [ScrollRectController](#)

Scroll rect controller. Can be used to bring something inside a ScrollRect into focus

- class [SetAnimatorBool](#)
- class [SimpleFader](#)
- class [SliderPopUp](#)

Slider pop up. Expects a Text Component somewhere as a child of the Slider, usually as a child of the Handle

- class [Slot](#)
- class [SpriteSwapToggle](#)
- class [StringOptions](#)

String options. Shows an enum Field with the displaynames and sets the choice to the corresponding value. Can be implicitly converted to the chosen string. If ownChoice is set to true

- class [Swipable](#)
- class [TextDial](#)
- class [TextReveal](#)

Replaces the text on a Text Component with random Numbers. Then gradually reveals the text while replacing the numbers with the string Character after Character.

- class [Toast](#)
- class [ToolTip](#)

Tool tip. Simple class for displaying tooltips. Registers with TooltipManager Singleton and can be accessed via it's `toolTipName` Property from there.

- class [ToolTipManager](#)

Access Point for showing tooltips. The tooltips can be accessed via the Singleton instance of this class.

- class [ToolTipTarget](#)

Tool tip target. Put this script on any UI Element that you want to show a Tooltip. The `tooltipPosition` transform will determine the placement of the Tooltip with it's position and pivot (which will allow for finer control of the relative placement of the Tooltip)

- class [TransformTransition](#)
- class [Typer](#)

Typing effect for UI Text Component

- class [UIMenu](#)

A Menu which transitions to another UI Menu using the `ITransitionMenu` Components on the Gameobject. Events will be called when the Menu opens or closes.

- class [UnitySingleton](#)

Unity singleton. A Monobehaviour variant of the Singleton Pattern

Enumerations

- enum **TransformProperty** { **Position**, **Scale**, **Rotation** }

4.2 Package MA.EaseNTween

Classes

- class **Easing**
Easing Functions
- class **ExtensionMethods**
- class [Tween](#)
- class [TweenManager](#)

Enumerations

- enum [EasingTypes](#) {
Linear, **QuadraticIn**, **QuadraticOut**, **QuadraticInOut**,
QuarticIn, **QuarticOut**, **QuarticInOut**, **QuinticIn**,
QuinticOut, **QuinticInOut**, **CubicIn**, **CubicOut**,
CubicInOut, **ExponentialIn**, **ExponentialOut**, **ExponentialInOut**,
CircularIn, **CircularOut**, **CircularInOut**, **SinusoidalIn**,
SinusoidalOut, **SinusoidalInOut**, **ElasticIn**, **ElasticOut**,
ElasticInOut, **BounceIn**, **BounceOut**, **BounceInOut**,
BackIn, **BackOut**, **BackInOut** }
The Easing Types to choose From

4.2.1 Enumeration Type Documentation

4.2.1.1 enum MA.EaseNTween.EasingTypes

The Easing Types to choose From

4.3 Package MA.Editor

Classes

- class [GetOrAddComponentDrawer](#)
- class [RequireDependenciesDrawer](#)
- class [SpriteSheetEditor](#)
Sprite Sheet [Editor](#). Use Case is primarily creation of Sprite Sheets from even numbered amounts of PNG image Sequences into a Power of 2 Spritesheet for Animation.
- class [UIAnimatorWindow](#)

4.4 Package UnityEngine

Namespaces

- package [EventSystems](#)

4.5 Package UnityEngine.EventSystems

Classes

- interface [IChangePage](#)
- interface [IgainedItem](#)
- interface [ILevelChangeRequest](#)
- interface [IListElementSelected](#)
- interface [IlostItem](#)

Chapter 5

Class Documentation

5.1 MA.AbstractInputValidator Class Reference

Inherits MonoBehaviour.

Inherited by [MA.OddValidator](#), and [MA.RegexValidator](#).

Public Member Functions

- virtual bool **validateInput** (string input)

Public Attributes

- string **failurmessage**

The documentation for this class was generated from the following file:

- AbstractInputValidator.cs

5.2 MA.AnimatorExpandableListElement Class Reference

Inherits [MA.ExpandableListElement](#).

Protected Member Functions

- override void **Awake** ()
- override void **contract** ()
- override void **expand** ()

Protected Attributes

- int **boolID**

Additional Inherited Members

The documentation for this class was generated from the following file:

- AnimatorExpandableListElement.cs

5.3 MA.AnimatorInputValidation Class Reference

Inherits [MA.InputValidation](#).

Protected Member Functions

- override void **Awake** ()
- override void **handleInputFailure** (string failuremessage)
- override void **handleInputSuccess** ()

Protected Attributes

- Animator **anim**
- string **AnimatorBoolAlias**

Additional Inherited Members

The documentation for this class was generated from the following file:

- AnimatorInputValidation.cs

5.4 MA.AnimatorModal Class Reference

Inherits MonoBehaviour, and [MA.IModal](#).

Inherited by [MA.AnimatorToast](#).

Public Member Functions

- virtual void **display** ()
- void **ModifyModal** (string text)
- void **ModifyModal** (string text, System.Action onAccept, bool overwriteCallbacks=false)
- void **ModifyModal** (string question, System.Action onAccept, System.Action onRefuse, bool overwriteCallbacks=false)
- void **ModifyModal** (System.Action onCancel, bool overwriteCallbacks=false)
- void **ModifyModal** (string[] texts, bool overwriteCallbacks, params System.Action[] actions)
- void **setupHeader** (string headline)
- void **ModifyModalImage** (Sprite image)
- virtual void **hide** ()

Public Attributes

- Button **acceptButton**

Properties

- GameObject **modalObject** [get, set]

The documentation for this class was generated from the following file:

- AnimatorModal.cs

5.5 MA.AnimatorPageIndexDisplay Class Reference

Inherits MonoBehaviour, and [MA.IStatusChanged](#).

Public Member Functions

- void **initialize** ()
- void **statusChanged** (int newStatus)

The documentation for this class was generated from the following file:

- AnimatorPageIndexDisplay.cs

5.6 MA.AnimatorToast Class Reference

Animator toast. Hides an Displays a [Toast](#) using the Animator.

Inherits [MA.AnimatorModal](#), and [MA.IToast](#).

Public Member Functions

- void **changeModalText** (Sprite image)
- void **hide** (float seconds)
- override void **display** ()
- override void **hide** ()

Protected Attributes

- Image **toastImage**
- Coroutine **hideRoutine**
- float **hideTime**
- bool **showing** = false

Properties

- bool **IsShowing** [get]

Additional Inherited Members

5.6.1 Detailed Description

Animator toast. Hides an Displays a [Toast](#) using the Animator.

The documentation for this class was generated from the following file:

- AnimatorToast.cs

5.7 MA.AnimatorToolTip Class Reference

Animator tool tip, handles the showing and hiding of the toolTip via the Animator

Inherits [MA.ToolTip](#).

Public Member Functions

- override void **show** (RectTransform target)
Shows the tooltip at the targetPosition with the pivot of the target. Override for a Tooltip Pop-Up with effects
- override void **hide** ()

Protected Member Functions

- override void **Awake** ()

Protected Attributes

- string **animatorBoolAlias**
- Animator **animator**

Additional Inherited Members

5.7.1 Detailed Description

Animator tool tip, handles the showing and hiding of the toolTip via the Animator

5.7.2 Member Function Documentation

5.7.2.1 override void MA.AnimatorToolTip.show (RectTransform *target*) [virtual]

Shows the tooltip at the targetPosition with the pivot of the target. Override for a Tooltip Pop-Up with effects

Parameters

<i>target</i>	Target.
---------------	---------

Reimplemented from [MA.ToolTip](#).

The documentation for this class was generated from the following file:

- AnimatorToolTip.cs

5.8 MA.AnimatorTransition Class Reference

Uses the Animator for UI Animations

Inherits MonoBehaviour, and [MA.IMenuTransition](#).

Public Member Functions

- void **closeAnimation** (System.Action onFinished)
- void **openAnimation** (System.Action onFinished)

Properties

- float **length** [get]

5.8.1 Detailed Description

Uses the Animator for UI Animations

The documentation for this class was generated from the following file:

- AnimatorTransition.cs

5.9 MA.BaseInventory< T > Class Template Reference

Base inventory. Manages Inventory Items of type T (Storing References, Accepting or Refusing new Items, Connecting Slots (Implementing [IItemDropTarget](#)) with Items (with a Component implementing [IDroppableItem](#))). The Slots should be children of the Inventory.

Inherits [MA.BaseItemMenu< T >](#), [UnityEngine.EventSystems.IgainedItem](#), and [UnityEngine.EventSystems.IlostItem](#).

Public Member Functions

- void **gainedItem** ([IDroppableItem](#) item, [IItemDropTarget](#) slotTarget)
- void **lostItem** ([IDroppableItem](#) item)

Protected Member Functions

- virtual void **Awake** ()
- virtual void **addedNewItem** (T newItem)
Overrides of this function will be called whenever there is a new item added to the Inventory
- virtual void **lostItem** ()
Overrides of this function will be called whenever an item is lost

Additional Inherited Members

5.9.1 Detailed Description

Base inventory. Manages Inventory Items of type T (Storing References, Accepting or Refusing new Items, Connecting Slots (Implementing [IItemDropTarget](#)) with Items (with a Component implementing [IDroppableItem](#))). The Slots should be children of the Inventory.

Type Constraints

T : *Component*

5.9.2 Member Function Documentation

5.9.2.1 virtual void **MA.BaseInventory< T >.addedNewItem** (T *newItem*) [protected],[virtual]

Overrides of this function will be called whenever there is a new item added to the Inventory

Parameters

<i>newItem</i>	New item.
----------------	-----------

5.9.2.2 **virtual void MA.BaseInventory< T >.lostItem ()** [protected],[virtual]

Overrides of this function will be called whenever an item is lost

The documentation for this class was generated from the following file:

- BaseInventory.cs

5.10 MA.BaseItemMenu< T > Class Template Reference

Base item menu. Backed up by a Dictionary of provided Type T (derived from Component). Keys are the Instance Ids of the Gameobjects associated with the Component T. The instance IDs will furthermore be accessible under the name of the GameObject they were registered with

Inherits MonoBehaviour.

Inherited by [MA.BaseInventory< T >](#).

Public Member Functions

- bool **itemExists** (string name)
- bool **itemExists** (int id)
- bool **anyItemExists** (params string[] names)
- bool **removeAllItemsWithName** (string name, bool onlyDeactivate=true)
- bool **removeItem** (int id)
- T **getItem** (string name)
- T **getItem** (int id)
- List< T > **getAllItems** (string name)

Protected Member Functions

- void **registerChildrenAsItems** ()
- virtual void **disposeOfItem** (T item)
- bool [registerItem](#) (T item)

Registers the item with the Component instance ID

Protected Attributes

- Dictionary< int, T > **items** = new Dictionary<int, T>()
- Dictionary< string, List< int > > **nameLookUp** = new Dictionary<string, List<int>>()

5.10.1 Detailed Description

Base item menu. Backed up by a Dictionary of provided Type T (derived from Component). Keys are the Instance Ids of the Gameobjects associated with the Component T. The instance IDs will furthermore be accessible under the name of the GameObject they were registered with

Type Constraints

T : *Component*

5.10.2 Member Function Documentation

5.10.2.1 bool MA.BaselItemMenu< T >.registerItem (T *item*) [protected]

Registers the item with the Component instance ID

Returns

`true`, if item was registered, `false` otherwise.

Parameters

<i>item</i>	Item.
-------------	-------

The documentation for this class was generated from the following file:

- BaselItemMenu.cs

5.11 MA.CanvasElement3D Class Reference

This Component takes care of scaling a (child) 3D Object with a Mesh Renderer to fit a Rect Transform. The 3D Object will be uniformly scaled and can either fit the height, width or bounds of the parent Rect Transform

Inherits UIBehaviour.

Public Member Functions

- void **initialize** ()
- void **scaleMesh** ()
- float **fittingScaleFactor** ()

Public Attributes

- bool **autoUpdate** = true
- bool **eased** = true
- Transform **meshtransform**

Protected Member Functions

- override void **Awake** ()
- override void **OnRectTransformDimensionsChange** ()

5.11.1 Detailed Description

This Component takes care of scaling a (child) 3D Object with a Mesh Renderer to fit a Rect Transform. The 3D Object will be uniformly scaled and can either fit the height, width or bounds of the parent Rect Transform

The documentation for this class was generated from the following file:

- CanvasElement3D.cs

5.12 MA.CanvasGroupTransition Class Reference

Inherits MonoBehaviour, and [MA.IMenuTransition](#).

Public Member Functions

- void **openAnimation** (Action onFinished)
- void **closeAnimation** (Action onFinished)

Public Attributes

- float **animationLength** = 1f

Properties

- float **length** [get, set]

The documentation for this class was generated from the following file:

- CanvasGroupTransition.cs

5.13 MA.CenterOnClick Class Reference

Works with a [ScrollRectController](#) to center the ScrollRect viewport on this GameObject when clicked on
Inherits MonoBehaviour, and IPointerClickHandler.

Public Member Functions

- void **OnPointerClick** (PointerEventData eventData)

5.13.1 Detailed Description

Works with a [ScrollRectController](#) to center the ScrollRect viewport on this GameObject when clicked on
The documentation for this class was generated from the following file:

- CenterOnClick.cs

5.14 MA.ColorInputValidation Class Reference

Inherits [MA.InputValidation](#).

Protected Member Functions

- override void **Awake** ()
- override void **handleInputFailure** (string failuremessage)
- override void **handleInputSuccess** ()

Protected Attributes

- Image **imageToColor**
- Color **failureColor** = Color.red

Additional Inherited Members

The documentation for this class was generated from the following file:

- [ColorInputValidation.cs](#)

5.15 ColorScheme Class Reference

Inherits [ScriptableObject](#).

Public Attributes

- [MA.ColorWrapper\[\]](#) **colors**

The documentation for this class was generated from the following file:

- [ColorScheme.cs](#)

5.16 MA.ColorWrapper Class Reference

Public Attributes

- string **m_ColorName**
- Color32 **m_color** = Color.white

The documentation for this class was generated from the following file:

- [ColorScheme.cs](#)

5.17 MA.Dial Class Reference

[Dial](#). Showing progress between a min and a max value via the fillAmount of an Image

Inherits [MonoBehaviour](#).

Inherited by [MA.TextDial](#).

Public Member Functions

- virtual void **displayProgress** ()

Public Attributes

- float **value**

Protected Member Functions

- virtual void **Start** ()

Protected Attributes

- Image **image**
- bool **eased** = false
- [EasingTypes](#) **easing** = EasingTypes.QuarticIn
- float **animationLength** = 0.2f

Properties

- float **Factor** [get]
- float **Value** [get, set]

5.17.1 Detailed Description

[Dial](#). Showing progress between a min and a max value via the fillAmount of an Image

The documentation for this class was generated from the following file:

- Dial.cs

5.18 MA.DisplayablePaletteColor Class Reference

Displayable palette color. A class with a Custom Drawer to Choose from a Color from all Color Palettes in the asset folder. Implicitly convertible to Color

Static Public Member Functions

- static implicit **operator Color** ([DisplayablePaletteColor](#) d)

Public Attributes

- string **colorname** = ""
- Color32 **color** = Color.white

5.18.1 Detailed Description

Displayable palette color. A class with a Custom Drawer to Choose from a Color from all Color Palettes in the asset folder. Implicitly convertible to Color

The documentation for this class was generated from the following file:

- DisplayablePaletteColor.cs

5.19 DisplayablePaletteColorDrawer Class Reference

Inherits [PropertyDrawer](#).

Public Member Functions

- override void **OnGUI** (Rect position, SerializedProperty property, GUIContent label)
- override float **GetPropertyHeight** (SerializedProperty property, GUIContent label)

The documentation for this class was generated from the following file:

- DisplayablePaletteColorDrawer.cs

5.20 MA.DraggableItem Class Reference

Inherits MonoBehaviour, IBeginDragHandler, IDragHandler, IEndDragHandler, and [MA.IDroppableItem](#).

Inherited by [MA.EasedDraggableItem](#).

Public Member Functions

- void **OnBeginDrag** (PointerEventData eventData)
- void **OnDrag** (PointerEventData eventData)
- void **OnEndDrag** (PointerEventData eventData)
- virtual void **returnToPrevious** ()

Protected Member Functions

- void **Awake** ()

Protected Attributes

- Vector2 **previousPosition**
- Canvas **canvas**
- CanvasGroup **canvasgroup**
- Transform **previousHolder**

Properties

- GameObject **holdingObject** [get]
- GameObject **previousParent** [get]
- bool **blocked** [get, set]

The documentation for this class was generated from the following file:

- DraggableItem.cs

5.21 MA.DraggablePage Class Reference

Inherits [MA.Swipable](#), [MA.IPage](#), and [MA.MBoundsCheck](#).

Inherited by [MA.EasedDraggablePage](#).

Public Member Functions

- override void **OnEndDrag** (PointerEventData eventData)
- virtual void **leaveUpOrRight** ()
- virtual void **leaveDownOrLeft** ()
- virtual void **enterUpOrRight** ()
- virtual void **enterDownOrLeft** ()
- virtual void **returnToMiddle** ()
- virtual void **onBecameActive** ()
- virtual void **onBecameInactive** ()

Public Attributes

- UnityEvent **OnActivation**

Protected Member Functions

- virtual void **Awake** ()
- override bool **boundsCheck** ()

Protected Attributes

- [PageController](#) **controller**

Properties

- GameObject **pageObject** [get]

The documentation for this class was generated from the following file:

- DraggablePage.cs

5.22 MA.EasedDraggableItem Class Reference

Inherits [MA.DraggableItem](#).

Public Member Functions

- override void **returnToPrevious** ()

Additional Inherited Members

The documentation for this class was generated from the following file:

- EasedDraggableItem.cs

5.23 MA.EasedDraggablePage Class Reference

Inherits [MA.DraggablePage](#).

Public Member Functions

- override void **leaveDownOrLeft** ()
- override void **leaveUpOrRight** ()
- override void **enterDownOrLeft** ()
- override void **enterUpOrRight** ()
- override void **returnToMiddle** ()

Protected Member Functions

- override void **returnToPrevious** (Vector2 oldPosition)

Additional Inherited Members

The documentation for this class was generated from the following file:

- EasedDraggablePage.cs

5.24 MA.EasedExpandableListElement Class Reference

Inherits [MA.ExpandableListElement](#).

Protected Member Functions

- override void **Awake** ()
- override void **expand** ()
- override void **contract** ()

Additional Inherited Members

The documentation for this class was generated from the following file:

- EasedExpandableListElement.cs

5.25 MA.EasedPage Class Reference

Inherits MonoBehaviour, and [MA.IPage](#).

Public Member Functions

- void **leaveUpOrRight** ()
- void **enterUpOrRight** ()
- void **leaveDownOrLeft** ()
- void **enterDownOrLeft** ()
- void **returnToMiddle** ()
- void **onBecameActive** ()
- void **onBecameInactive** ()

Public Attributes

- UnityEvent **OnActivation**

Protected Attributes

- [PageController](#) **controller**
- float **animationLength** = 0.5f
- [EasingTypes](#) **easing**

Properties

- GameObject **pageObject** [get]

The documentation for this class was generated from the following file:

- EasedPage.cs

5.26 MA.EasedSlot Class Reference

Inherits [MA.Slot](#).

Public Member Functions

- override void **MoveToSlot** ([IDroppableItem](#) drop)

Additional Inherited Members

The documentation for this class was generated from the following file:

- EasedSlot.cs

5.27 MA.EasedSwipable Class Reference

Inherits [MA.Swipable](#).

Protected Member Functions

- override void **returnToPrevious** (Vector2 oldPosition)
- override bool **boundsCheck** ()
- bool **boundsCheck** (out float relativeDistance)
- override void **disposeOf** ()
- override void **visualizeDrag** ()

Protected Attributes

- [EasingTypes](#) **easing** = EasingTypes.ElasticOut
- float **swipeDistanceThreshold** = 0.5f

Additional Inherited Members

The documentation for this class was generated from the following file:

- EasedSwipable.cs

5.28 MA.ExpandableListElement Class Reference

Inherits [MA.ListElement](#).

Inherited by [MA.AnimatorExpandableListElement](#), and [MA.EasedExpandableListElement](#).

Public Member Functions

- override void **OnSelect** (BaseEventData data)
- override void **OnDeselect** (BaseEventData data)

Public Attributes

- UnityEvent **onExpand**
- UnityEvent **onMinimize**

Protected Member Functions

- override void **Awake** ()
- virtual void **expand** ()
- virtual void **contract** ()

Protected Attributes

- LayoutElement **layout**
- bool **startExpanded** = false
- Vector2 **contractedSize**

The documentation for this class was generated from the following file:

- ExpandableListElement.cs

5.29 MA.FadingLevelChanger Class Reference

Inherits MonoBehaviour, and [UnityEngine.EventSystems.ILevelChangeRequest](#).

Public Member Functions

- void **changeLevelTo** (int levelID)
- void **changeLevelTo** (string levelName)

Public Attributes

- [EasingTypes](#) **easing**
- float **animationLength** = 0.7f

The documentation for this class was generated from the following file:

- FadingLevelChanger.cs

5.30 MA.GameObjectDeactivator Class Reference

Game object deactivator. Deactivates a gameObject based on the Animator State it's Animator is in without constantly checking the Animator State or Transition Info. Used by the Animator [Toast](#) for Example

Inherits StateMachineBehaviour.

Public Member Functions

- override void **OnStateEnter** (Animator animator, AnimatorStateInfo stateInfo, int layerIndex)
- override void **OnStateExit** (Animator animator, AnimatorStateInfo stateInfo, int layerIndex)

Public Attributes

- bool **ActivateOnEnter** = false
- bool **parent** = false

5.30.1 Detailed Description

Game object deactivator. Deactivates a gameObject based on the Animator State it's Animator is in without constantly checking the Animator State or Transition Info. Used by the Animator [Toast](#) for Example

The documentation for this class was generated from the following file:

- GameObjectDeactivator.cs

5.31 GetOrAddComponent Class Reference

Gets the declared Component or adds one if none is present on the GameObject (or its children and parent when lookInChildren or lookInParent is set to true) Only works if the property field is serialized (public or decorated with the SerializeField Attribute)

Inherits PropertyAttribute.

Public Member Functions

- **GetOrAddComponent** (bool lookInChildren, bool lookInParent)

Public Attributes

- bool **lookInChildren** = false

5.31.1 Detailed Description

Gets the declared Component or adds one if none is present on the GameObject (or its children and parent when lookInChildren or lookInParent is set to true) Only works if the property field is serialized (public or decorated with the SerializeField Attribute)

The documentation for this class was generated from the following file:

- GetOrAddComponent.cs

5.32 MA.Editor.GetOrAddComponentDrawer Class Reference

Inherits PropertyDrawer.

Public Member Functions

- override void **OnGUI** (Rect position, SerializedProperty property, GUIContent label)

The documentation for this class was generated from the following file:

- GetOrAddComponentDrawer.cs

5.33 UnityEngine.EventSystems.IChangePage Interface Reference

Inherits IEventSystemHandler.

Inherited by [MA.PageController](#).

Public Member Functions

- void **changeToPage** (int index)
- bool **changeUp** ()
- bool **changeDown** ()

The documentation for this interface was generated from the following file:

- EventSystemInterfaces.cs

5.34 MA.IDroppableItem Interface Reference

Inherited by [MA.DraggableItem](#).

Public Member Functions

- void **returnToPrevious** ()

Properties

- GameObject **holdingObject** [get]
- GameObject **previousParent** [get]
- bool **blocked** [get, set]

The documentation for this interface was generated from the following file:

- IDroppableItem.cs

5.35 UnityEngine.EventSystems.IgainedItem Interface Reference

Inherits IEventSystemHandler.

Inherited by [MA.BaseInventory< T >](#).

Public Member Functions

- void **gainedItem** ([MA.IDroppableItem](#) item, [MA.ItemDropTarget](#) targetSlot)

The documentation for this interface was generated from the following file:

- EventSystemInterfaces.cs

5.36 MA.ItemDropTarget Interface Reference

Inherited by [MA.Slot](#).

Public Member Functions

- void **MoveToSlot** ([IDroppableItem](#) droppable)

The documentation for this interface was generated from the following file:

- ItemDropTarget.cs

5.37 UnityEngine.EventSystems.ILevelChangeRequest Interface Reference

Inherits IEventSystemHandler.

Inherited by [MA.FadingLevelChanger](#).

Public Member Functions

- void **changeLevelTo** (int levelID)
- void **changeLevelTo** (string levelName)

The documentation for this interface was generated from the following file:

- EventSystemInterfaces.cs

5.38 UnityEngine.EventSystems.IListElementSelected Interface Reference

Inherits [IEventSystemHandler](#).

Inherited by [MA.ListController](#).

Public Member Functions

- void **elementSelected** ([MA.ListElement](#) elem)

The documentation for this interface was generated from the following file:

- EventSystemInterfaces.cs

5.39 UnityEngine.EventSystems.IlostItem Interface Reference

Inherits [IEventSystemHandler](#).

Inherited by [MA.BaseInventory< T >](#).

Public Member Functions

- void **lostItem** ([MA.IDroppableItem](#) item)

The documentation for this interface was generated from the following file:

- EventSystemInterfaces.cs

5.40 MA.ImageFillEaser Class Reference

Inherits [MonoBehaviour](#).

Public Member Functions

- void **animateFill** (float target, float animationLength=0.5f)

The documentation for this class was generated from the following file:

- ImageFillEaser.cs

5.41 MA.IMenuTransition Interface Reference

Inherited by [MA.AnimatorTransition](#), [MA.CanvasGroupTransition](#), and [MA.TransformTransition](#).

Public Member Functions

- void **closeAnimation** (Action onFinished)
- void **openAnimation** (Action onFinished)

Properties

- float **length** [get]

The documentation for this interface was generated from the following file:

- IMenuTransition.cs

5.42 MA.IModal Interface Reference

Inherited by [MA.AnimatorModal](#), and [MA.IToast](#).

Public Member Functions

- void **display** ()
- void **ModifyModal** (string maintext)
- void **ModifyModal** (string maintext, Action onAccept, bool overwriteCallbacks)
- void **ModifyModal** (string maintext, Action onAccept, Action onRefuse, bool overwriteCallbacks)
- void **ModifyModal** (Action onCancel, bool overwriteCallbacks)
- void **ModifyModal** (string[] texts, bool overwriteCallbacks, params Action[] actions)
- void **ModifyModalImage** (Sprite image)
- void **setupHeader** (string headline)
- void **hide** ()

Properties

- GameObject **modalObject** [get, set]

The documentation for this interface was generated from the following file:

- IModal.cs

5.43 MA.InputNavigation Class Reference

Inherits MonoBehaviour, ISelectHandler, and IDeselectHandler.

Public Member Functions

- void **OnSelect** (BaseEventData eventData)
- void **OnDeselect** (BaseEventData eventData)

The documentation for this class was generated from the following file:

- InputNavigation.cs

5.44 MA.InputValidation Class Reference

Inherits MonoBehaviour.

Inherited by [MA.AnimatorInputValidation](#), and [MA.ColorInputValidation](#).

Public Attributes

- InputField.SubmitEvent **onInputValidated**
- UnityEvent **onValidationFailure**
- string **validatedInput** = ""

Protected Member Functions

- virtual void **Awake** ()
- void **validateInputAgainstAllValidators** (string input)
- virtual void **handleInputFailure** (string failuremessage)
- virtual void **handleInputSuccess** ()

Protected Attributes

- bool **onlyCheckOnEndEdit** = true
- [AbstractInputValidator](#)[] **validators** = new [AbstractInputValidator](#)[0]
- bool **isValidInput**
- InputField **inputfield**

Properties

- bool **IsValidInput** [get]
- string **ValidatedInput** [get]

The documentation for this class was generated from the following file:

- InputValidation.cs

5.45 MA.IPage Interface Reference

Inherited by [MA.DraggablePage](#), and [MA.EasedPage](#).

Public Member Functions

- void **leaveUpOrRight** ()
- void **enterUpOrRight** ()
- void **leaveDownOrLeft** ()
- void **enterDownOrLeft** ()
- void **returnToMiddle** ()
- void **onBecameActive** ()
- void **onBecameInactive** ()

Properties

- GameObject **pageObject** [get]

The documentation for this interface was generated from the following file:

- IPage.cs

5.46 MA.IStatusChanged Interface Reference

Inherited by [MA.AnimatorPageIndexDisplay](#), and [MA.RememberPage](#).

Public Member Functions

- void **statusChanged** (int newStatus)
- void **initialize** ()

The documentation for this interface was generated from the following file:

- IStatusChanged.cs

5.47 MA.IToast Interface Reference

Inherits [MA.IModal](#).

Inherited by [MA.AnimatorToast](#).

Public Member Functions

- void **hide** (float seconds)

Properties

- bool **IsShowing** [get]

The documentation for this interface was generated from the following file:

- IToast.cs

5.48 MA.KeyCodeEvent Class Reference

Inherits MonoBehaviour.

The documentation for this class was generated from the following file:

- KeyCodeEvent.cs

5.49 MA.LevelBaseItem Class Reference

Inherits MonoBehaviour.

Inherited by [MA.LevelItem](#).

Public Member Functions

- virtual void **initializeLevelItem** (string name, int id)

Protected Attributes

- string **levelName**
- int **levelID**

The documentation for this class was generated from the following file:

- LevelBaseItem.cs

5.50 MA.LevelChangeButton Class Reference

Level change button. Triggers the `changeLevelTo` function on a Component implementing `ILevelChangeRequest` higher in the Hierarchy

Inherits `MonoBehaviour`.

5.50.1 Detailed Description

Level change button. Triggers the `changeLevelTo` function on a Component implementing `ILevelChangeRequest` higher in the Hierarchy

The documentation for this class was generated from the following file:

- LevelChangeButton.cs

5.51 MA.LevelItem Class Reference

Inherits [MA.LevelBaseItem](#).

Public Member Functions

- override void **initializeLevelItem** (string name, int id)

Additional Inherited Members

The documentation for this class was generated from the following file:

- LevelItem.cs

5.52 MA.LevelItemMenu Class Reference

Inherits [MA.BaseItemMenu](#)< [LevelItem](#) >.

Public Member Functions

- bool **addItem** (GameObject prefab, string itemName="", bool insertAsFirst=false)

Additional Inherited Members

The documentation for this class was generated from the following file:

- `LevelItemMenu.cs`

5.53 MA.LevelMenuHelper Class Reference

Inherits `MonoBehaviour`.

Public Attributes

- `string[]` **scenes**
- `GameObject` **LevelItemPrefab**

The documentation for this class was generated from the following file:

- `LevelMenuHelper.cs`

5.54 MA.ListController Class Reference

List controller. A List can have one of it's Children selected and hold's a Reference to the last selected Element.

Inherits `MonoBehaviour`, and [UnityEngine.EventSystems.IListElementSelected](#).

Inherited by [MA.ScrollListController](#).

Public Member Functions

- `void` **buildList** ()
- `T` **CurrentlySelectedComponent**< `T` > ()
- `virtual void` **elementSelected** ([ListElement](#) elem)

Protected Member Functions

- `void` **Start** ()

Protected Attributes

- [ListElement](#) **currentlySelected** = null
- `List`< [ListElement](#) > **elements** = new `List`<[ListElement](#)>()

Properties

- [ListElement](#) **CurrentlySelected** [get]
- `int` **index** [get]

5.54.1 Detailed Description

List controller. A List can have one of it's Children selected and hold's a Reference to the last selected Element.

The documentation for this class was generated from the following file:

- ListController.cs

5.55 MA.ListElement Class Reference

Inherits Selectable.

Inherited by [MA.ExpandableListElement](#).

Public Member Functions

- override void **OnSelect** (BaseEventData eventData)

The documentation for this class was generated from the following file:

- ListElement.cs

5.56 MA.ListElementFocusHolder Class Reference

List element focus holder. Propagates Select and Deselect Elements of an Selectable inside (as a Child) an List Element upwards so that a selected List Element doesn't lose Focus

Inherits MonoBehaviour, ISelectHandler, and IDeselectHandler.

Public Member Functions

- void **OnSelect** (BaseEventData eventData)
- void **OnDeselect** (BaseEventData eventData)

5.56.1 Detailed Description

List element focus holder. Propagates Select and Deselect Elements of an Selectable inside (as a Child) an List Element upwards so that a selected List Element doesn't lose Focus

The documentation for this class was generated from the following file:

- ListElementFocusHolder.cs

5.57 MA.MBoundsCheck Interface Reference

Inherited by [MA.DraggablePage](#), and [MA.ScrollListController](#).

The documentation for this interface was generated from the following file:

- MBoundsCheck.cs

5.58 MA.MNumberFormat Interface Reference

Inherited by [MA.SliderPopUp](#), and [MA.TextDial](#).

The documentation for this interface was generated from the following file:

- MNumberFormat.cs

5.59 MA.Modal Class Reference

Public Attributes

- string **modalname**
- GameObject **modalprefab**

The documentation for this class was generated from the following file:

- ModalManager.cs

5.60 MA.ModalManager Class Reference

[Modal](#) manager. Add to Scene and add [Modal](#) Prefabs. The Names (which should be unique) can then be used to display or modify the [Modal](#) at runtime later.

Inherits [MA.UnitySingleton](#)< [ModalManager](#) >.

Public Member Functions

- bool **displayModalIfExists** (string modalName)
- void **displayModal** (string modalName)
- void **hideActiveModal** ()
- [IModal](#) **requestModal** (string modalName)

Properties

- [IModal](#) **ActiveModal** [get]

Additional Inherited Members

5.60.1 Detailed Description

[Modal](#) manager. Add to Scene and add [Modal](#) Prefabs. The Names (which should be unique) can then be used to display or modify the [Modal](#) at runtime later.

The documentation for this class was generated from the following file:

- ModalManager.cs

5.61 MA.NotificationManager Class Reference

Inherits [MA.UnitySingleton](#)< [NotificationManager](#) >.

Public Member Functions

- bool **displayOrChangeToast** (string toastName, string toastText, float displayTime=2f, string toastHeader=null, Sprite toastSprite=null)
- bool **displayOrAddToast** (string toastName, string toastText, float displayTime=2f, bool addOnTop=true, string toastHeader=null, Sprite toastSprite=null)
- void **hideActiveToast** ()

Additional Inherited Members

The documentation for this class was generated from the following file:

- NotificationManager.cs

5.62 MA.NumberReveal Class Reference

Inherits [MA.TextReveal](#).

Protected Member Functions

- override string **stringReplacer** (string toReplace)

Protected Attributes

- int **minNumber** = 0

Additional Inherited Members

The documentation for this class was generated from the following file:

- NumberReveal.cs

5.63 MA.OddValidator Class Reference

Inherits [MA.AbstractInputValidator](#).

Public Member Functions

- override bool **validateInput** (string input)

Additional Inherited Members

The documentation for this class was generated from the following file:

- OddValidator.cs

5.64 MA.PageController Class Reference

Controller for Children Pages (implementing [IPage](#)). Switches Pages between an Active and two inactive(Off Screen) States. Can also be used to access the current page index and total amount of pages.

Inherits MonoBehaviour, and [UnityEngine.EventSystems.IChangePage](#).

Public Member Functions

- void [buildPageList](#) (int openedPage)
(Re)Builds the page list with all current Children implementing [IPage](#). Sets the active Page to the int parameter
- void **changeToPage** (int index)
- bool **changeUp** ()
- bool **changeDown** ()

Public Attributes

- Transform **leftOrDownPosition**
- bool **Blocked**

Properties

- [IPage](#) **CurrentPage** [get]
- int **PageAmount** [get]
- int **CurrentPageIndex** [get]
- int **PageOpenOnStart** [get, set]

5.64.1 Detailed Description

Controller for Children Pages (implementing [IPage](#)). Switches Pages between an Active and two inactive(Off Screen) States. Can also be used to access the current page index and total amount of pages.

5.64.2 Member Function Documentation

5.64.2.1 void MA.PageController.buildPageList (int openedPage)

(Re)Builds the page list with all current Children implementing [IPage](#). Sets the active Page to the int parameter

The documentation for this class was generated from the following file:

- PageController.cs

5.65 MA.PageSwitcher Class Reference

Inherits MonoBehaviour.

The documentation for this class was generated from the following file:

- PageSwitcher.cs

5.66 MA.Pagination Class Reference

Inherits MonoBehaviour.

Public Member Functions

- void **changeUp** ()
- void **changeDown** ()

The documentation for this class was generated from the following file:

- [Pagination.cs](#)

5.67 MA.RandomCharReveal Class Reference

Inherits [MA.TextReveal](#).

Protected Member Functions

- override string **stringReplacer** (string toReplace)

Protected Attributes

- char[] **replacementChars**

Additional Inherited Members

The documentation for this class was generated from the following file:

- [RandomCharReveal.cs](#)

5.68 MA.RegexValidator Class Reference

Inherits [MA.AbstractInputValidator](#).

Public Member Functions

- override bool **validateInput** (string input)

Public Attributes

- [StringOptions](#) **regexToMatch**

5.68.1 Member Data Documentation

5.68.1.1 StringOptions MA.RegexValidator.regexToMatch

Initial value:

```
= new StringOptions(new string[5]{"Year between 1900-2099", "Domain", "URL", "Date", "E-Mail"},
    new string[5]{"^(19|20)\d{2}$", @"^([a-z][a-z0-9-]+\.\.[-*\.])+[a-z]{2,6}$", @"^http:\/\/[a-zA-Z0-9-]+\.[a-zA-Z]{2,3}$",
    @"^([1-9]|0[1-9]|12)[0-9]|3[01])\D{([1-9]|0[1-9]|1[012])\D(19[0-9][0-9]|20[0-9][0-9])$"}, @"^[_]*([a-z0-9-]+\.\.[-*\.])?+@([a-z][a-z0-9-]+\.\.[-*\.])+[a-z]{2,6}$"})
```

The documentation for this class was generated from the following file:

- RegexValidator.cs

5.69 MA.RememberPage Class Reference

Inherits MonoBehaviour, and [MA.IStatusChanged](#).

Public Member Functions

- void **statusChanged** (int newStatus)
- void **initialize** ()

The documentation for this class was generated from the following file:

- RememberPage.cs

5.70 RequireDependencies Class Reference

Require dependencies. Displays a Warning if the GameObject doesn't have all of the Components specified and lists which are missing.

Inherits PropertyAttribute.

Public Member Functions

- **RequireDependencies** (bool lookInChildren, params Type[] requiredComponents)
- **RequireDependencies** (params Type[] requiredComponents)

Public Attributes

- Type[] **requiredDependencies**
- bool **lookInChildren**

5.70.1 Detailed Description

Require dependencies. Displays a Warning if the GameObject doesn't have all of the Components specified and lists which are missing.

The documentation for this class was generated from the following file:

- RequireDependencies.cs

5.71 MA.Editor.RequireDependenciesDrawer Class Reference

Inherits PropertyDrawer.

Public Member Functions

- override void **OnGUI** (Rect position, SerializedProperty property, GUIContent label)
- override float **GetPropertyHeight** (SerializedProperty property, GUIContent label)

The documentation for this class was generated from the following file:

- RequireDependenciesDrawer.cs

5.72 MA.ResizePanel Class Reference

Resize panel. Taken from Unity UI Samples almost unmodified except for the Scroll direction adjustment according to the Pivot of the Rect. Resizing is always away from the Pivot

Inherits MonoBehaviour, IPointerDownHandler, and IDragHandler.

Public Member Functions

- void **OnPointerDown** (PointerEventData data)
- void **OnDrag** (PointerEventData data)

5.72.1 Detailed Description

Resize panel. Taken from Unity UI Samples almost unmodified except for the Scroll direction adjustment according to the Pivot of the Rect. Resizing is always away from the Pivot

The documentation for this class was generated from the following file:

- ResizePanel.cs

5.73 MA.ReturnController Class Reference

Using Keys to return to the next higher Menu from the current Menu

Inherits MonoBehaviour.

5.73.1 Detailed Description

Using Keys to return to the next higher Menu from the current Menu

The documentation for this class was generated from the following file:

- ReturnController.cs

5.74 MA.Scheduler Class Reference

[Scheduler](#). A class for managing recurring Tasks in arbitrary intervals or scheduling future Actions

Inherits [MA.UnitySingleton](#)< [Scheduler](#) >.

Static Public Member Functions

- static Coroutine [createTask](#) (Action task, float interval=1f, int NumberOfExecutions=-1)
Creates the task. If number of Executions is negative(default), then the task will execute indefinitely at the given interval rate
- static Coroutine [createWatchTask](#) (Func< bool > condition, Action callbackWhenTrue, float interval=1f, bool endWhenTrue=true)
Creates a watch task. The task will execute when the supplied condition is true (at the time of checking), by default this will stop checking once the condition has been met once
- static void **endTask** (Coroutine cor)
- static Coroutine [everyOtherFrame](#) (Action Task, int frameAmount)
Executes a Task every other frame.

Additional Inherited Members

5.74.1 Detailed Description

[Scheduler](#). A class for managing recurring Tasks in arbitrary intervals or scheduling future Actions

5.74.2 Member Function Documentation

5.74.2.1 static Coroutine MA.Scheduler.createTask (Action task, float interval = 1f, int NumberOfExecutions = -1)
[static]

Creates the task. If number of Executions is negative(default), then the task will execute indefinitely at the given interval rate

Returns

The Coroutine for the task.

Parameters

<i>task</i>	Task.
<i>interval</i>	Interval.
<i>NumberOfExecutions</i>	Number of executions.

5.74.2.2 static Coroutine MA.Scheduler.createWatchTask (Func< bool > condition, Action callbackWhenTrue, float interval = 1f, bool endWhenTrue = true) [static]

Creates a watch task. The task will execute when the supplied condition is true (at the time of checking), by default this will stop checking once the condition has been met once

Returns

The Coroutine for the watch task.

Parameters

<i>condition</i>	Condition.
------------------	------------

<i>callbackWhen↔ True</i>	Callback when true.
<i>interval</i>	Interval.
<i>endWhenTrue</i>	If set to <code>true</code> end when true.

5.74.2.3 static Coroutine MA.Scheduler.everyOtherFrame (Action Task, int frameAmount) [static]

Executes a Task every other frame.

Returns

The Coroutine.

Parameters

<i>Task</i>	Task.
<i>frameAmount</i>	Frame amount.

The documentation for this class was generated from the following file:

- Scheduler.cs

5.75 MA.ScrollListController Class Reference

Calculates the appropriate Scrollposition for a list inside a ScrollRect. Can be used with a [ScrollRectController](#) to bring the selected Element smoothly into focus.

Inherits [MA.ListController](#), and [MA.MBoundsCheck](#).

Public Member Functions

- override void **elementSelected** ([ListElement](#) elem)

Additional Inherited Members

5.75.1 Detailed Description

Calculates the appropriate Scrollposition for a list inside a ScrollRect. Can be used with a [ScrollRectController](#) to bring the selected Element smoothly into focus.

The documentation for this class was generated from the following file:

- ScrollListController.cs

5.76 MA.ScrollRectController Class Reference

Scroll rect controller. Can be used to bring something inside a ScrollRect into focus

Inherits MonoBehaviour, and IBeginDragHandler.

Public Member Functions

- virtual void **Awake** ()

- void **jumpTo** (float scrollPosition)
- void **jumpTo** (Vector2 scrollPosition)
- void **centerOn** (RectTransform centerTransform)
- void **abortScrollMovement** ()
- void **OnBeginDrag** (PointerEventData eventData)

Public Attributes

- ScrollRect **scrollRect**

5.76.1 Detailed Description

Scroll rect controller. Can be used to bring something inside a ScrollRect into focus

The documentation for this class was generated from the following file:

- ScrollRectController.cs

5.77 MA.SetAnimatorBool Class Reference

Inherits MonoBehaviour.

Public Member Functions

- void **setBoolTrue** (string name)
- void **setBoolFalse** (string name)
- void **toggleBool** (string name)

The documentation for this class was generated from the following file:

- SetAnimatorBool.cs

5.78 MA.SimpleFader Class Reference

Inherits [MA.UnitySingleton< SimpleFader >](#).

Public Member Functions

- Coroutine **fade** (float target, float length, [EasingTypes](#) fadingEasing, System.Action onComplete=null)

Public Attributes

- float **animationLength** = 0.7f
- [EasingTypes](#) **easing** = EasingTypes.Linear

Properties

- float **FadeValue** [get, set]

Additional Inherited Members

The documentation for this class was generated from the following file:

- SimpleFader.cs

5.79 MA.SliderPopUp Class Reference

Slider pop up. Expects a Text Component somewhere as a child of the Slider, usually as a child of the Handle
Inherits MonoBehaviour, IPointerDownHandler, IPointerUpHandler, and [MA.MNumberFormat](#).

Public Member Functions

- void **OnPointerDown** (PointerEventData eventData)
- void **OnPointerUp** (PointerEventData eventData)

Properties

- int **NumbersBehindComma** [get, set]

5.79.1 Detailed Description

Slider pop up. Expects a Text Component somewhere as a child of the Slider, usually as a child of the Handle
The documentation for this class was generated from the following file:

- SliderPopUp.cs

5.80 MA.Slot Class Reference

Inherits MonoBehaviour, IDropHandler, and [MA.ItemDropTarget](#).
Inherited by [MA.EasedSlot](#).

Public Member Functions

- T **ItemComponent**< T > ()
- void **OnDrop** (PointerEventData eventData)
- virtual void **MoveToSlot** ([IDroppableItem](#) drop)

Properties

- GameObject **Item** [get]

The documentation for this class was generated from the following file:

- Slot.cs

5.81 MA.Editor.SpriteSheetEditor Class Reference

Sprite Sheet [Editor](#). Use Case is primarily creation of Sprite Sheets from even numbered amounts of PNG image Sequences into a Power of 2 Spritesheet for Animation.

Inherits EditorWindow.

5.81.1 Detailed Description

Sprite Sheet [Editor](#). Use Case is primarily creation of Sprite Sheets from even numbered amounts of PNG image Sequences into a Power of 2 Spritesheet for Animation.

The documentation for this class was generated from the following file:

- SpriteSheetEditor.cs

5.82 MA.SpriteSwapToggle Class Reference

Inherits MonoBehaviour.

The documentation for this class was generated from the following file:

- SpriteSwapToggle.cs

5.83 MA.StringOptions Class Reference

String options. Shows an enum Field with the displaynames and sets the choice to the corresponding value. Can be implicitly converted to the chosen string. If ownChoice is set to true

Public Member Functions

- **StringOptions** (string[] displaynames, string[] values, bool ChoiceAllowed=true)

Static Public Member Functions

- static implicit **operator string** ([StringOptions](#) o)

Public Attributes

- string[] **optionnames**
- string[] **options**
- string **chosenoption** = ""
- string **choice**
- bool **OwnChoiceAllowed** = true

5.83.1 Detailed Description

String options. Shows an enum Field with the displaynames and sets the choice to the corresponding value. Can be implicitly converted to the chosen string. If ownChoice is set to true

The documentation for this class was generated from the following file:

- StringOptions.cs

5.84 StringOptionsDrawer Class Reference

Inherits PropertyDrawer.

Public Member Functions

- override void **OnGUI** (Rect position, SerializedProperty property, GUIContent label)
- override float **GetPropertyHeight** (SerializedProperty property, GUIContent label)

The documentation for this class was generated from the following file:

- StringOptionsDrawer.cs

5.85 MA.Swipable Class Reference

Inherits MonoBehaviour, IBeginDragHandler, IDragHandler, and IEndDragHandler.

Inherited by [MA.DraggablePage](#), and [MA.EasedSwipable](#).

Public Member Functions

- virtual void **OnBeginDrag** (PointerEventData eventData)
- virtual void **OnDrag** (PointerEventData eventData)
- virtual void **OnEndDrag** (PointerEventData eventData)

Protected Member Functions

- virtual void **returnToPrevious** (Vector2 oldPosition)
- virtual bool **boundsCheck** ()
- virtual void **disposeOf** ()
- virtual void **visualizeDrag** ()

Protected Attributes

- Vector2 **previousPosition**
- bool **vertical** = false

The documentation for this class was generated from the following file:

- Swipable.cs

5.86 MA.TextDial Class Reference

Inherits [MA.Dial](#), and [MA.MNumberFormat](#).

Public Member Functions

- override void **displayProgress** ()

Protected Attributes

- Text **text**
- int **numbersBehindComma** = 3

Additional Inherited Members

The documentation for this class was generated from the following file:

- TextDial.cs

5.87 MA.TextReveal Class Reference

Replaces the text on a Text Component with random Numbers. Then gradually reveals the text while replacing the numbers with the string Character after Character.

Inherits MonoBehaviour.

Inherited by [MA.NumberReveal](#), and [MA.RandomCharReveal](#).

Public Member Functions

- void **replaceAndReveal** (string message)

Protected Member Functions

- virtual void **Awake** ()
- virtual string **stringReplacer** (string toReplace)

Protected Attributes

- Text **textComponent**
- float **revealSpeed** = 0.1f
- bool **revealOnStartup** = true
- StringBuilder **builder**

Properties

- float **RevealSpeed** [get, set]

5.87.1 Detailed Description

Replaces the text on a Text Component with random Numbers. Then gradually reveals the text while replacing the numbers with the string Character after Character.

The documentation for this class was generated from the following file:

- TextReveal.cs

5.88 MA.Toast Class Reference

Public Attributes

- string **toastname**
- GameObject **toastPrefab**

The documentation for this class was generated from the following file:

- NotificationManager.cs

5.89 MA.ToolTip Class Reference

Tool tip. Simple class for displaying tooltips. Registers with TooltipManager Singleton and can be accessed via it's tooltipName Property from there.

Inherits MonoBehaviour.

Inherited by [MA.AnimatorToolTip](#).

Public Member Functions

- virtual void **show** (RectTransform target)
Shows the tooltip at the targetPosition with the pivot of the target. Override for a Tooltip Pop-Up with effects
- virtual void **hide** ()
- virtual void **setup** (string tooltipMessage, string tooltipHeadline=null, Sprite tooltipSprite=null)

Public Attributes

- string **tooltipName**
- Text **tooltipText**
- Image **tooltipImage**

Protected Member Functions

- virtual void **Awake** ()

5.89.1 Detailed Description

Tool tip. Simple class for displaying tooltips. Registers with TooltipManager Singleton and can be accessed via it's tooltipName Property from there.

5.89.2 Member Function Documentation

5.89.2.1 virtual void MA.ToolTip.show (RectTransform *target*) [virtual]

Shows the tooltip at the targetPosition with the pivot of the target. Override for a Tooltip Pop-Up with effects

Parameters

<i>target</i>	Target.
---------------	---------

Reimplemented in [MA.AnimatorToolTip](#).

The documentation for this class was generated from the following file:

- ToolTip.cs

5.90 MA.ToolTipManager Class Reference

Access Point for showing tooltips. The tooltips can be accessed via the Singleton instance of this class.

Inherits [MA.UnitySingleton](#)< [ToolTipManager](#) >.

Public Member Functions

- void **registerToolTip** (string tooltipname, [ToolTip](#) tooltip)
- [ToolTip](#) **getToolTip** (string tooltipname)
- void **showToolTip** (string tooltipName, RectTransform rectTrans, string tooltipMessage, string tooltipHeader=null, Sprite tooltipImage=null)
- void **hideToolTip** (string tooltipName)

Additional Inherited Members

5.90.1 Detailed Description

Access Point for showing tooltips. The tooltips can be accessed via the Singleton instance of this class.

The documentation for this class was generated from the following file:

- ToolTipManager.cs

5.91 MA.ToolTipTarget Class Reference

Tool tip target. Put this script on any UI Element that you want to show a Tooltip. The tooltipPosition transform will determine the placement of the Tooltip with it's position and pivot (which will allow for finer control of the relative placement of the Tooltip)

Inherits MonoBehaviour, IPointerEnterHandler, and IPointerExitHandler.

Public Member Functions

- void **OnPointerEnter** (PointerEventData eventData)
- void **OnPointerExit** (PointerEventData eventData)

Public Attributes

- string **ToolTipName**
- string **ToolTipHeader**
- string **ToolTipMessage**
- Sprite **ToolTipImage**
- RectTransform **tooltipPosition**

5.91.1 Detailed Description

Tool tip target. Put this script on any UI Element that you want to show a Tooltip. The tooltipPosition transform will determine the placement of the Tooltip with it's position and pivot (which will allow for finer control of the relative placement of the Tooltip)

The documentation for this class was generated from the following file:

- ToolTipTarget.cs

5.92 MA.TransformTransition Class Reference

Inherits MonoBehaviour, and [MA.IMenuTransition](#).

Public Member Functions

- void **openAnimation** (Action onFinished)
- void **closeAnimation** (Action onFinished)

Public Attributes

- float **animationLength** = 1f

Properties

- float **length** [get, set]

The documentation for this class was generated from the following file:

- TransformTransition.cs

5.93 MA.EaseNTween.Tween Class Reference

Public Types

- enum **TweenType** {
 delay, **f**, **v2**, **v3**,
 c }
- enum **TweenRepeat** { **Once**, **PingPong**, **Loop** }

Public Member Functions

- [Tween](#) (Action< float > valueSetter, float from, float to, float length, [EasingTypes](#) easeType=EasingTypes.Linear, bool unscaled=false, TweenRepeat repeat=TweenRepeat.Once, Action OnComplete=doNothing)
 Use this for animating float values. The first parameter has to a setter for the float
- [Tween](#) (Action< Vector2 > valueSetter, Vector2 from, Vector2 to, float length, [EasingTypes](#) easeType=EasingTypes.Linear, bool unscaled=false, TweenRepeat repeat=TweenRepeat.Once, Action OnComplete=doNothing)
 Use this for animating a Vector2

- **Tween** (Action< Vector3 > valueSetter, Vector3 from, Vector3 to, float length, [EasingTypes](#) easeType=EasingTypes.Linear, bool unscaled=false, TweenRepeat repeat=TweenRepeat.Once, Action OnComplete=doNothing)

Use this for animating a Vector3

- **Tween** (Action< Color > valueSetter, Color from, Color to, float length, [EasingTypes](#) easeType=EasingTypes.Linear, bool unscaled=false, TweenRepeat repeat=TweenRepeat.Once, Action OnComplete=doNothing)

Use this for animating colours

- **Tween** (float seconds)
- void **SwitchTargets** ()

Static Public Member Functions

- static void **swap**< T > (ref T param1, ref T param2)
- static Func< float > **timeFunc** (bool unscaled)

Public Attributes

- float **from**
- Vector2 **fromV2**
- Vector3 **fromV3**
- Color **fromC**
- Func< float, float, float, float > **easeFunc**
- Func< float > **time**
- Action **OnComplete**
- const Action **doNothing** = null
- TweenType **type** = TweenType.f
- TweenRepeat **repeat** = TweenRepeat.Once

Properties

- Vector2 **ValueV2** [set]
- Vector3 **ValueV3** [set]
- Color **ValueC** [set]
- float **Value** [set]

5.93.1 Constructor & Destructor Documentation

- 5.93.1.1 **MA.EaseNTween.Tween.Tween** (Action< float > *valueSetter*, float *from*, float *to*, float *length*, [EasingTypes](#) *easeType* = EasingTypes.Linear, bool *unscaled* = false, TweenRepeat *repeat* = TweenRepeat.Once, Action *OnComplete* = doNothing)

Use this for animating float values. The first parameter has to a setter for the float

Parameters

<i>valueSetter</i>	Value setter.
<i>from</i>	From.
<i>to</i>	To.

<i>length</i>	Length.
<i>easeType</i>	Ease type.
<i>unscaled</i>	If set to <code>true</code> unscaled.
<i>repeat</i>	Repeat.
<i>OnComplete</i>	On complete.

5.93.1.2 **MA.EaseNTween.Tween.Tween** (*Action*< *Vector2* > *valueSetter*, *Vector2* *from*, *Vector2* *to*, float *length*, *EasingTypes* *easeType* = *EasingTypes.Linear*, bool *unscaled* = `false`, *TweenRepeat* *repeat* = *TweenRepeat.Once*, *Action* *OnComplete* = *doNothing*)

Use this for animating a *Vector2*

Parameters

<i>valueSetter</i>	Value setter.
<i>from</i>	From.
<i>to</i>	To.
<i>length</i>	Length.
<i>easeType</i>	Ease type.
<i>unscaled</i>	If set to <code>true</code> unscaled.
<i>repeat</i>	Repeat.
<i>OnComplete</i>	On complete.

5.93.1.3 **MA.EaseNTween.Tween.Tween** (*Action*< *Vector3* > *valueSetter*, *Vector3* *from*, *Vector3* *to*, float *length*, *EasingTypes* *easeType* = *EasingTypes.Linear*, bool *unscaled* = `false`, *TweenRepeat* *repeat* = *TweenRepeat.Once*, *Action* *OnComplete* = *doNothing*)

Use this for animating a *Vector3*

Parameters

<i>valueSetter</i>	Value setter.
<i>from</i>	From.
<i>to</i>	To.
<i>length</i>	Length.
<i>easeType</i>	Ease type.
<i>unscaled</i>	If set to <code>true</code> unscaled.
<i>repeat</i>	Repeat.
<i>OnComplete</i>	On complete.

5.93.1.4 **MA.EaseNTween.Tween.Tween** (*Action*< *Color* > *valueSetter*, *Color* *from*, *Color* *to*, float *length*, *EasingTypes* *easeType* = *EasingTypes.Linear*, bool *unscaled* = `false`, *TweenRepeat* *repeat* = *TweenRepeat.Once*, *Action* *OnComplete* = *doNothing*)

Use this for animating colours

Parameters

<i>valueSetter</i>	Value setter.
<i>from</i>	From.
<i>to</i>	To.

<i>length</i>	Length.
<i>easeType</i>	Ease type.
<i>unscaled</i>	If set to <code>true</code> unscaled.
<i>repeat</i>	Repeat.
<i>OnComplete</i>	On complete.

The documentation for this class was generated from the following file:

- TweenManager.cs

5.94 MA.EaseNTween.TweenManager Class Reference

Inherits [MA.UnitySingleton](#)< [TweenManager](#) >.

Public Member Functions

- Coroutine [playTween](#) ([Tween](#) t)
Plays a tween and returns a Coroutine which you can cache to abort the [Tween](#) later
- void [chainTweens](#) (params [Tween](#)[] tweens)
Chains the tweens for sequential execution
- void **stopAllTweens** ()
- void **stopTween** (Coroutine cor)

Static Public Member Functions

- static void **Dispose** ()

Additional Inherited Members

5.94.1 Member Function Documentation

5.94.1.1 void MA.EaseNTween.TweenManager.chainTweens (params Tween[] tweens)

Chains the tweens for sequential execution

Parameters

<i>tweens</i>	Tweens.
---------------	---------

5.94.1.2 Coroutine MA.EaseNTween.TweenManager.playTween (Tween t)

Plays a tween and returns a Coroutine which you can cache to abort the [Tween](#) later

Parameters

<i>t</i>	Tween .
----------	-------------------------

The documentation for this class was generated from the following file:

- TweenManager.cs

5.95 MA.Typer Class Reference

Typing effect for UI Text Component

Inherits MonoBehaviour.

Public Member Functions

- void **StopTyping** ()
- void **ReplaceText** (string text)
- void **AddText** (string text)
- void **HideText** ()

Public Attributes

- Text **textComponent**

Properties

- float **TypeDelay** [get, set]

5.95.1 Detailed Description

Typing effect for UI Text Component

The documentation for this class was generated from the following file:

- Typer.cs

5.96 MA.Editor.UIAnimatorWindow Class Reference

Inherits EditorWindow.

The documentation for this class was generated from the following file:

- UIAnimatorWindow.cs

5.97 MA.UIMenu Class Reference

A Menu which transitions to another UI Menu using the ITransitionMenu Components on the Gameobject. Events will be called when the Menu opens or closes.

Inherits MonoBehaviour.

Public Member Functions

- void **openNext** (UIMenu next)
- void **returnToHigherMenuInstanceMethod** ()
- void **close** (Action onFinished)
- void **open** (Action onFinished)

Static Public Member Functions

- static void **returnToHigherMenu** ()

Public Attributes

- UnityEvent **OnOpen**
- UnityEvent **OnClose**

Properties

- [IMenuTransition](#) **AnimatableToCall** [get]

5.97.1 Detailed Description

A Menu which transitions to another UI Menu using the ITransitionMenu Components on the Gameobject. Events will be called when the Menu opens or closes.

The documentation for this class was generated from the following file:

- UIMenu.cs

5.98 MA.UnitySingleton< T > Class Template Reference

Unity singleton. A MonoBehaviour variant of the Singleton Pattern

Inherits MonoBehaviour.

Protected Member Functions

- virtual void **OnDestroy** ()
- void **OnApplicationQuit** ()
- virtual void **onDestruction** ()

Properties

- static T **instance** [get]
Gets the instance or instantiates an instance on a new Gameobject
- static bool **HasInstance** [get]
- static bool **IsDestroyed** [get]

5.98.1 Detailed Description

Unity singleton. A MonoBehaviour variant of the Singleton Pattern

Type Constraints

T : *MonoBehaviour*

5.98.2 Property Documentation

5.98.2.1 T MA.UnitySingleton< T >.instance [static], [get]

Gets the instance or instantiates an instance on a new GameObject

The instance.

The documentation for this class was generated from the following file:

- UnitySingleton.cs
